

Skyware Technologies announces Shipping of Inmarsat Global Xpress Terminals

Skyware Technologies are delighted to announce yet another milestone for the company and Inmarsat's GX network. We have begun shipment of our GX terminals - The transportable ATOM 65 and fixed SKY terminals.

The ATOM 65 is the smallest and lightest (33% lighter than the closest alternative) transportable terminal available for Global Xpress resulting from an efficient carbon fiber dual-reflector antenna system and integrated RF transceiver package, and can be assembled without tools in less than two minutes.

Please come visit us at **CABSAT**, March 10-12, in Dubai with MENA NETS (Hall 8, Stand 803) or at **SATELLITE**, March 17-19, in Washington, D.C. (Booth #1075). Register for a FREE SATELLITE exhibition visitor pass with VIP code "SKYFTY".

To schedule a meeting with one of our representatives at either location simply send your details and preferred time and date to info@skywaretechnologies.com.
